Course Insights

An Internal learning analytical tool of UQ

Course Insights is an instructor-facing learning analytics dashboard with dynamic student data and support for personalized feedback.

Course Insights

Team

1 UX designer (myself)
3 Developers

Tools

Sketch, Invision, Zoom, Mural etc

My Role

Facilitate Design thinking and co-design sessions, create user personas based on research and data from stakeholders. Create user journeys, site maps, and information architecture. Create low-fidelity wireframes and prototypes and do usability testing with end-users. Design and create high-fidelity and annotated wireframes and prototypes. Create a design system for the development team to use as a guide.

Deliverables

- Problem solving by user analysis
- User personas
- Information Architecture/ Site map
- Low-fidelity wireframes and prototypes
- Final High-fidelity wireframes, prototypes, and UI screens
- Style guide
- Final Hi-fi screens & assets

The Problem

Course Insights Web app began with MVP but had cognitive load and confusing to use. Also, the filter builder was too huge taking a lot of space, it needed simplification.

The Solution

I got on board to conduct both UX/UI Design for their CI tool,

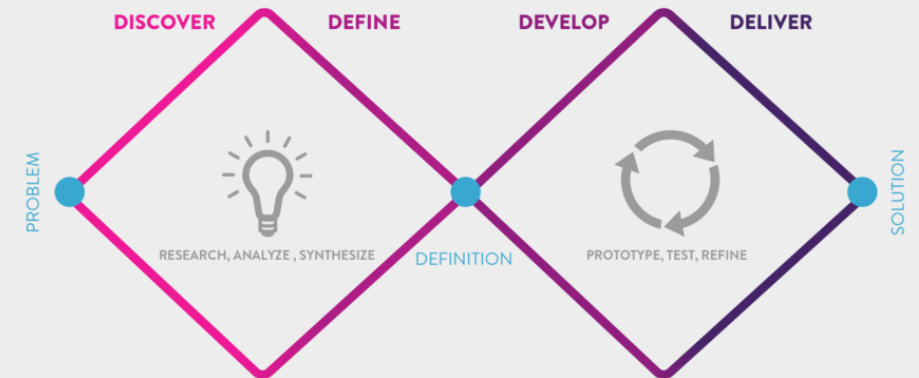

The aim was to create user-centered UX/UI designs for the desktop experience that would compliment and pair with the existing apps of UQ.

I conducted User analysis and facilitated design workshops, created user personas, designed information architecture, and user flows, as well as low-fidelity to high-fidelity wireframes and prototypes, and style guides.

Framework

Solo UX|UI Designer

As a team of one - I used the British Design Council's double diamond framework to help me guide my journey and process for this project.

Discover

Research

Conducted series of design thinking and co-design sessions to understand the user problem and how they are solving it.

Analysis

I conducted a UX/UI analysis of other university's LA platforms and apps to gain insights of the strengths and weaknesses in the Learning analytics field to discover where Course Insights could hold a useful edge

Synthesis

I compiled and presented my findings to the key stakeholders to further discuss an action plan, This included a priority matrix session where we decided on targeting the MVP needs of the site with the user needs and developers.

Define

Problem statement

I created problem statement based on the workshops, analysis of the user and research on other LA platforms and research papers to aid with user persona and stories

User Personas

I developed multiple user personas based on my research, interviews and internal data provided by SME's and stakeholders.

User Persona

Dora Barronga

"You can't expect change unless you give the data to the people who can make that change."

Age 50
Education Phd in Management
Occupation Professor of Marketing

Systematic Sensitive
Thinker Tactical

Bio

Dora is a self motivated professional and has been recently promoted as course coordinator due to her out of the box creative thinking. She is very systematic and keeps logs of most of the activities and files. She likes to interact and working by communicating with students and other professors.

Personality

Technology

Goals

- To Investigate the reasons and factors that are causing low performance among students
- To analyze the trend over a long period of time to find the point of increasing or decreasing performance of students and to report it to senior management to take necessary action.

Fraustrations

- Apps that prohibits the user from thinking.
- Apps that doesn't allow or user inputs
- Apps that overwhelm him with too much data and no option to control the amount of data that he can see.

Motivation

Cassie Steven

Bio

Cassie is a high maintainance professional and has been course coordinator from long time . She is very teaching focus and career driven keeps poor logs of most of the activities and files. She is not pragmatic and low data literacy. Needs tech support all the time in the data log.

Personality

Technology

Age 43
Education Phd in Management
Occupation Course Coordinator
Bio Chemistry

Experienced Intutive
low data literacy Tactical

Goals

- To Investigate the grades of the students from Grade centre and Blackboard
- To Check the course materials when and where the students used.
- Check the views of the multiplatform usage to make the course material multi functional.

Fraustrations

- Apps which shows raw data.
- Apps which gives more data to think and analyze about the interventions she thought about

Motivation

User Persona

Archie Smith

Age 32
Education Phd in Management
Occupation Lecture in Health Science

- Hardworking
- Ambitious
- Helpful
- Tactical

Bio

Archie is an ambitious person aims high in life. He has just begun his career as a Lecture and feeling more responsibility to fulfil. He believes that problem solving requires one to look at the bigger picture and exploring all the options.

Personality

Technology

Goals

- To Collect data about all the students to increase quality and standards of the class.
- Analyze the trends of data and talk to concerned students to help them overcome obstacles

Frustrations

- Apps that make him think rather than analyze.
- Apps that do not have clear flow of architecture
- Apps that overwhelm him with too much data and no option to control the amount of data that he can see.

Motivation

Develop

Ideation Exercise

I began with a few paper sketches and then moved Sketch and Invision to create low-fidelity wireframes and prototypes to run through with the development team before usability testing.

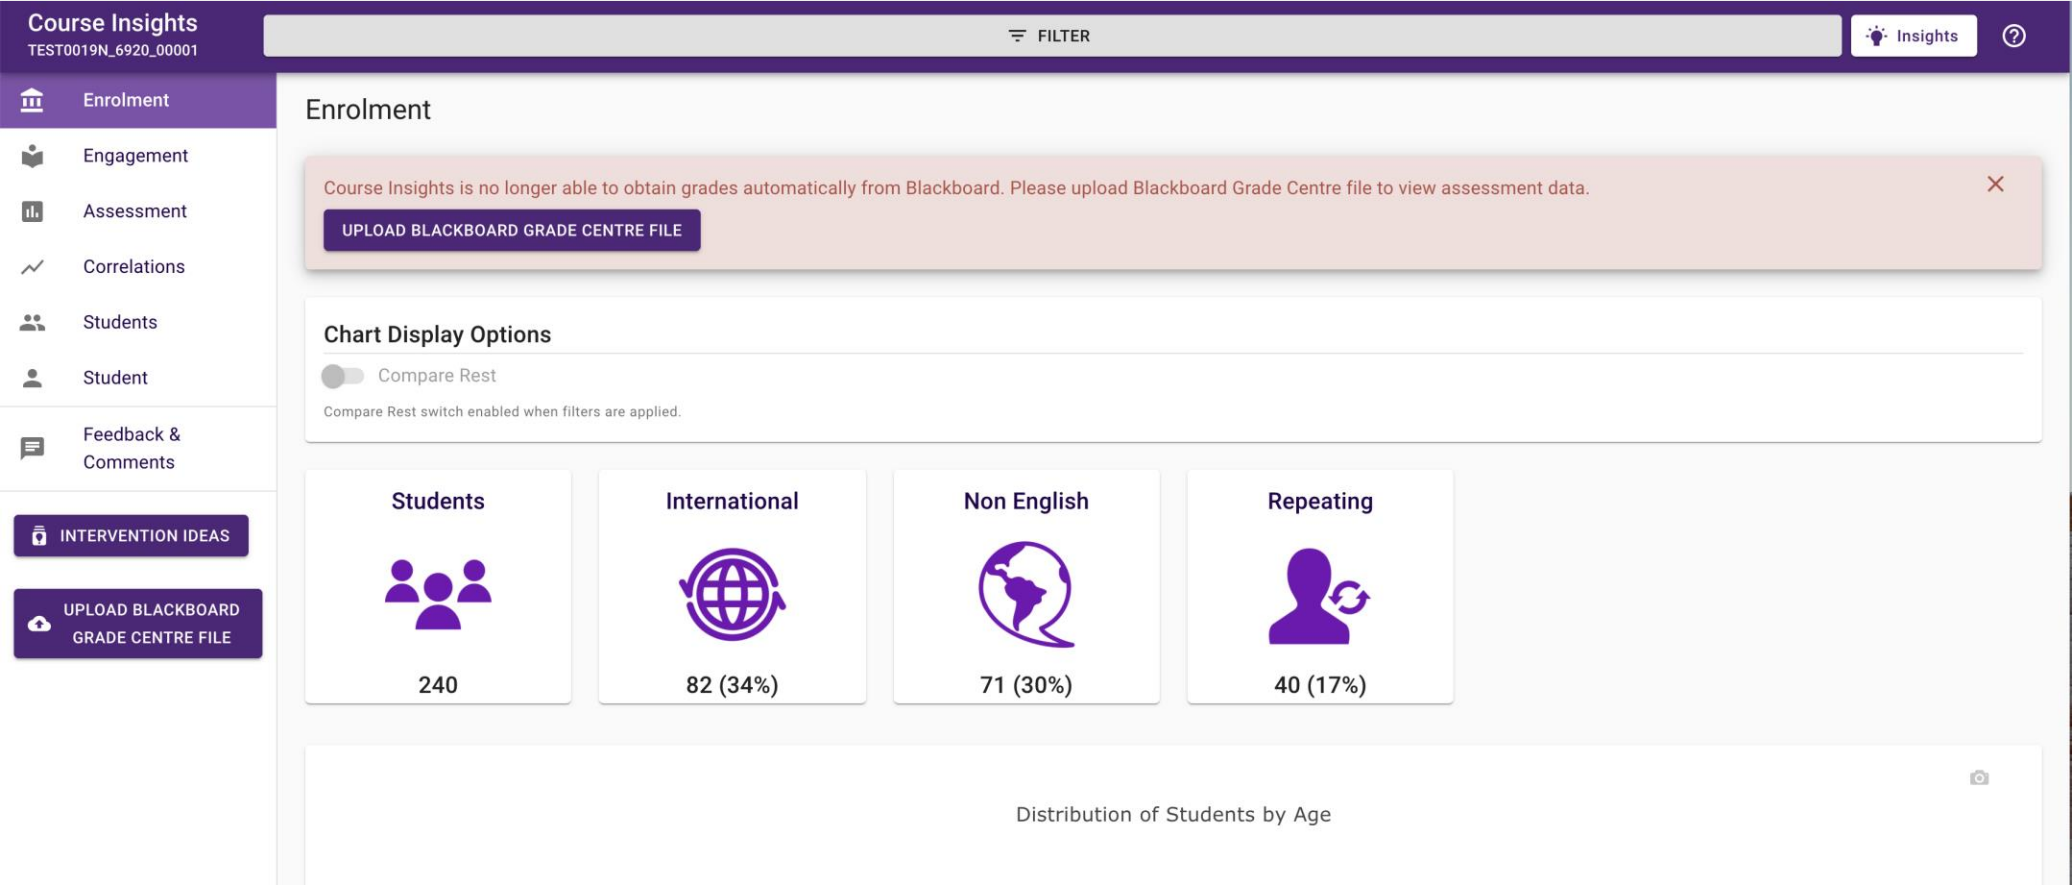

Information Architecture

With the priority matrix completed, the MVP requirements and features of the Web app were pretty simple, so I was able to create a simple sitemap for the developers' reference and to aid with user flows.

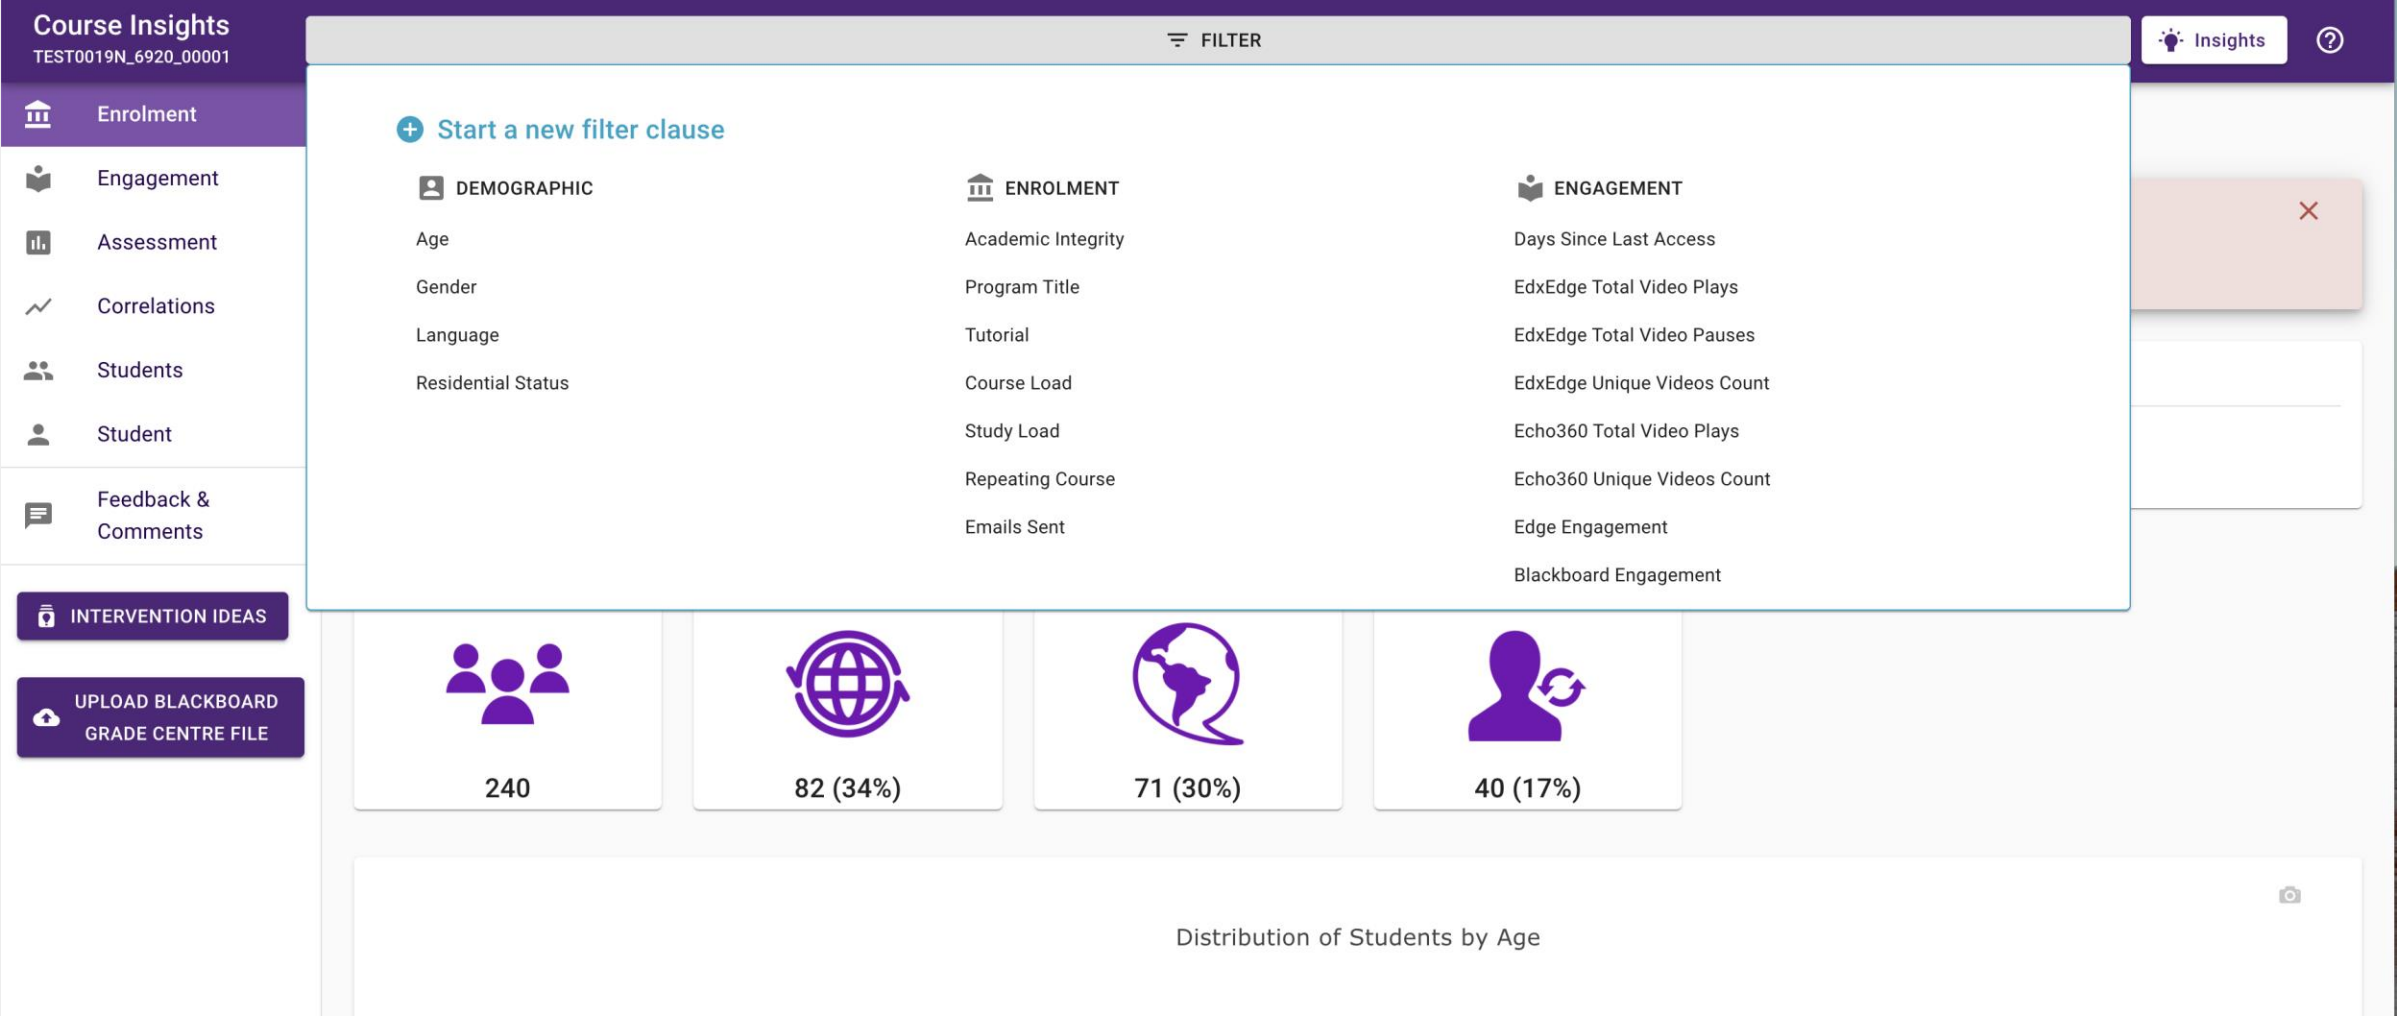

Wireframes and Prototypes

I created desktop low-fidelity wireframes & prototypes for the entire website and conducted 5 usability tests to ensure I could catch issues and iterate the designs going into the high-fidelity designs.
